Bulk deliveries of Green waste Compost

What is it and what is it good for?

The large pile of compost you now see at your site is the product of the local green waste collections in the Bristol and Bath area. The waste is composted and then delivered to our sites by our local supplier in Chipping Sodbury. We are lucky to have secured large scale deliveries at an excellent price. The composting process is closely monitored and regularly tested, and certified with a PAS 100 Certification and analysis of all bulk and trace elements.

How can I use it on my allotment?

This an excellent all-purpose soil conditioner:

- for mulching
- spreading on beds after cropping//over-winter
- for planting out and potting-on
- for bulking out your own compost heaps
- it has a P3, K3, N7 content and typical trace elements and minerals

It has even been used successfully for seed sowing (spinach) by a neighbour of mine.

We calculate an average saving of the use of five hundred large plastic sacks per annum with this bulk system. Also of course it is locally collected, made and delivered – a truly closed-cycle and a contribution to local air quality.
